

JES TOKEN

Powered By Jesus

FAITH-BASED DIGITAL ASSET & A COVENANT OF 100% TRANSPARENCY

Section 1: Introduction & Vision

The crypto world was built on the promise of financial freedom. Yet, countless hard-working people—including our founder—have been betrayed by projects hiding behind deceptive labels, losing millions of dollars to scams. That painful experience was the spark for a mission.

JES TOKEN (Powered By Jesus) is founded on trust, transparency, and a higher purpose. It is created to restore lost faith in cryptocurrency and stop the cycle of deception. Unlike projects that use "decentralization" as a buzzword, JES is built to be a 100% decentralized, immutable, and trustless ecosystem.

To guarantee zero room for betrayal, the developer will entirely renounce ownership after the launch setup. Once renounced, the token transitions into 100% Public Control, meaning no human can ever alter its code, taxes, or limits. It is a covenant of security, born from the founder's struggle and fueled by faith.

Section 2: Tokenomics & Distribution

A highly secure and balanced economic model designed for long-term growth and stability.

- Total Supply: 10,500,000 (10.5 Million) JES
- Initial Circulating Supply: 50% (5.25 Million)
- Locked Vesting Supply: 50% (5.25 Million) is strictly locked inside the smart contract.
- Anti-Dump Release Schedule: The locked tokens are protected by a strict 365-day time-lock. Only 750,000 tokens can be released per year, ensuring the developer can never dump tokens on the community.
- Transaction Tax (5%): Every transaction includes a 5% tax which is automatically routed to expand the Liquidity Pool and fund global marketing/development.

Section 3: Security & 100% Public Control

- Anti-Whale Protection: To prevent market manipulation by large investors (whales), the smart contract restricts single transactions and maximum wallet holdings. No single entity can crash the market.
- 100% Public Control (Renounced Ownership): Upon successful Mainnet launch and stabilization, the developer will renounce the contract ownership. The community will have absolute power, and the smart contract will live forever on the blockchain without any central authority.

Section 4: The Ultimate Vision (Global Real-World Utility)

JES is not just a token to be traded; it is designed to be a global digital currency.

- Real-World Transactions: Our vision is to integrate JES TOKEN with global payment gateways, allowing believers and communities worldwide to use JES for everyday purchases, charity donations, and merchant payments.
- A Currency of Trust: By bringing real-world utility to JES, we aim to make it a globally accepted cash alternative that operates on the principles of honesty and faith.

Section 5: Roadmap to the Future

Phase 1: Foundation & Security (Completed)

- Concept generation and Smart Contract Development.
- Deployment and rigorous testing on Binance Smart Chain (Testnet).

- Successful implementation of 5% Tax, Anti-Whale limits, and 365-day Vesting locks.
- Brand identity creation (Logo & Whitepaper).

Phase 2: The Public Launch

- Deployment on BNB Smart Chain (Mainnet).
- Liquidity Pool creation on PancakeSwap.
- Community building (Telegram, Twitter).
- Renouncing Ownership to hand over 100% Public Control.

Phase 3: Global Expansion

- Official listings on CoinMarketCap (CMC) and CoinGecko.
- Worldwide marketing campaigns and influencer partnerships.
- Securing listings on Centralized Exchanges (CEX).

Phase 4: Jesus Blockchain & Real-World Cash (The Grand Vision)

- Development and launch of our very own independent Layer-1 network: The Jesus Blockchain.
- Migrating JES from a standard BEP-20 token to a native coin on the Jesus Blockchain.
- Partnering with global payment processors to enable JES as a real-world digital cash for global merchants and charitable organizations.
